

Outside Edge: 8m wide x 3m width
Inside Edge: 7.34m x 2.34m

INFINITY COVE ONLY

!IMPORTANT
THE MAXIMUM UDL FOR THE STUDIO TRUSS IS 800KG

A UDL (uniform distributed load) is a force that is applied evenly over the distance of the support structure
For the least amount of deflection possible, this 800kg load should be distributed at approx. 40kg/m across the entire structure.

133kgs (MAX) may be loaded under each of the 6 x pick up points

Please do not refer to the truss loading chart as this system has other factors effecting its loading capabilities

IF IN DOUBT YOU SHOULD SEEK THE ADVICE OF A QUALIFIED RIGGER
